Entry Format

Vessel's name, duration in fleet, gross tonnage, year of build builder, place of build, description, length, breadth, horsepower, type of engines, speed, number of guns, history.

Note-It is common for a vessel's tonnage and dimensions to vary somewhat according to the manner of measurement and because of alterations made to a vessel during its lifetime. The figures given here are as far as possible taken from Lloyd's Register (reg. length between perpendicular posts rather than overall length, date of launch rather than date of completion) selected from register books as close as possible to the dates a vessel was in the Mitsubishi fleet.

Japanese Names

The only complete and unimpeachable way to write a Japanese name is in the indigenous kanji characters, and therefore these have been used where possible, in the form of the character used at

the time (non-simplified). Transliterations in Roman lettering are also given, but these have the disadvantage in being but one way in which the characters could be read or written. As a rule the transliterations given are the ones that have appeared in register books and company schedules. Where these have not been according to the Hepburn system which is generally used today, Hepburn transliterations have also been given. The surname is given first, as is common in Japan and was made official in 2019.

Abbreviations | -

cy. -engine cylinders

f. - funnel(s)

Han - Japanese feudal clan. "Kaga Han" was sometimes written "Kaga Clan" or "Prince of Kaga". The activities of clans were circumscribed somewhat during the Tokugawa period, and they were abolished on establishment of the Meiji government in 1868 and replaced by Prefectures.
